

Website Protection Site Scanner

Site Scanner identifies security threats on your website that hackers could use to steal information, infect your customers, or deface your site.

Automated daily scans. Daily scans check for more than 3,000 security flaws and vulnerabilities that malicious users can exploit to deface your site, infect visitors with malware, or steal sensitive information.

View your scorecard. Issues are ranked by threat severity – "Critical," "Warning," or "Informational" – so you can prioritize and respond accordingly.

Fix the threat. View recommendations for how to fix the issues. Need help? Call our security experts' – free!

Give visitors confidence. When your website receives a passing score, display the trusted Website Protection seal to show visitors they can click with confidence.

Don't get blacklisted. If Google® deems your site "suspicious," they will blacklist it from their search engine. Learn about and fix issues before that can happen.

Who is it for?

Bloggers who use customizable content management systems such as WordPress®, Drupal®, or Joomla!®.

Social websites that let users publish, share, or distribute content directly to the site and other visitors.

WebSite Tonight® and Quick Shopping Cart® users who customize their sites with third-party scripts and widgets.

Web developers who want to show clients their sites are safe for visitors.

Is it for you?

Do you have input fields on your site?

Input fields, such as comments or sign-up forms, are a hacker's playground. If your forms aren't configured to handle content securely, hackers can submit malicious data that can deface your site or obtain possibly sensitive information.

Do you link to documents?

Links can give malicious users more information than you intend, and hackers can use improperly formatted links to redirect visitors to phishing sites.

Setting up Website Protection Site Scanner

<http://help.securepaynet.net/article/5960>

The screenshot displays the Website Protection Site Scanner interface. At the top, it shows 'WEBSITE PROTECTION v1.5' and 'Logged in as: Joe Smith'. The main navigation includes 'Site Scanner' and 'Help'. Below the navigation, there are tabs for 'Home', 'History', and 'Settings'. The central content area is divided into several sections:

- May 04, 2011**: A date indicator with a refresh icon.
- Domain: coolsexample.com**: A dropdown menu with a 'View all domains' link.
- PASS**: A large green box indicating the overall status, with the text 'To keep your site secure, resolve all open issues. 5 Total Issues' and a 'Get Site Scanner Seal' link.
- Issue Count**: Three colored boxes showing counts: 0 Critical (red), 1 Warning (orange), and 4 Informational (blue).
- Open Issues**: A list of issues with descriptions and status indicators. The first issue is 'Database password strength represents how resistant your password is to guesses and malicious...' with a status of 'Not yet addressed'. Other issues include 'This plugin determines which HTTP methods are allowed on various cgi directories' and 'It is possible to enumerate directories on the web server', both also with a status of 'Not yet addressed'.
- Expert Security Help**: A section with a photo of two security experts and the text 'Let our award-winning security team keep your sites and information safe.' It includes contact information: 'Email: sitescanner@secureserver.net' and 'Call: (480) 463-8103'.
- Security Advisor** and **Resources**: Two tabs for additional information.
- Here's a few resources for you**: A section with two columns of links. The left column includes 'Site Seal' (with a description: 'Show visitors that your site is safe and reliable by displaying our site seal. Our seal tells everyone that you--') and 'FAQs'. The right column lists various resources like 'Purchase Additional Bandwidth for Your Virtual Dedicated/Dedicated Server', 'How to Purchase Additional Bandwidth for Your Virtual Dedicated/Dedicated Server', 'Purchase Additional Disk Space for Your Dedicated Server', 'Remove a Virtual Dedicated/Dedicated Server Add-On', 'What is Website Protection Site Scanner?', 'Why can't Website Protection Site Scanner contact my server?', 'Can I prevent Website Protection Site Scanner from submitting forms?', and 'What is Penetration Testing?'.
